

# ■ What To Do If Your Personal Data Has Been Stolen

(Client Guidance from Phenicie Business Management)

## 1. Confirm the Breach

- Verify the source (company email, bank alert, or monitoring service).
- Check the incident using **DarkScanPro.com**.
- Save all notices, emails, and screenshots as evidence.

## 2. Secure Accounts Immediately

- Change passwords on affected accounts (and related ones).
- Use unique, strong passwords (12+ characters).
- Enable Multi-Factor Authentication (MFA/2FA).
- Log out of all devices from account settings where possible.

## 3. Protect Financials

- Contact banks/credit card providers for fraud alerts and replacement cards.
- Place a credit freeze or fraud alert with Experian, Equifax, and TransUnion.
- Monitor bank and credit statements daily.

## 4. Watch for Identity Theft

- Get your free annual credit report ([annualcreditreport.com](https://annualcreditreport.com)).
- Sign up for credit monitoring (your bank or free services like Credit Karma).
- Watch for accounts, loans, or activity you didn't authorize.

## 5. Report the Incident

- FTC (U.S.): [identitytheft.gov](https://identitytheft.gov) → file a report and get a recovery plan.
- Local Police: especially for fraud, impersonation, or stolen funds.
- Employer/School/Organization: if their systems were part of the breach.

## 6. Protect Devices & Email

- Run antivirus/EDR scans on all devices.
- Check email inbox rules/forwarding for suspicious changes.
- Update operating systems, browsers, and apps.

## 7. Ongoing Monitoring

- Stay alert for phishing emails, texts, or scam calls.
- Enable account alerts for logins, transfers, and large purchases.
- Use **DarkScanPro.com** for continuous monitoring if sensitive data (SSN, medical, passport) was exposed.

## 8. For Businesses & Organizations

- Notify affected individuals quickly and transparently.
- Follow compliance laws (HIPAA, GDPR, PCI, etc.) for breach notifications.
- Document all actions taken for legal and insurance purposes.

■ Bottom line: Move fast, secure your accounts, monitor for fraud, and document everything. The first 24–48 hours are critical.
